

Project Profile

Location:

US

Project:

LYNXS

Industry:

Utility

Technologies / Platform:

- iOS & Android

Business Benefits:**Customer / Consumer**

- Keeping track of all the contacts as business cards.
- Making customized contact details based on the details you want to share with other person
- Create bar code
- Scan bar code
- Making contact list.

Client

LYNXS, the US based client.

Business Needs

- To help users to create a contact list with all the relevant information at one place.

Rapidsoft's Role

- To develop complete iOS & Android Mobile App from scratch.

Solution Overview**Mobile App**

- To help users to create their profile with all most of the personal information along with social media profiles.
- Once the user adds on the information and links the social media profiles then a bar code is generated that can be shared with multiple users.
- The bar code can be modified depending on the information user want to share with the other user.
- In this way user can select the information he/she wants to share with other users.
- Bar code scanner will also be there in the app that is once the user shares, the other user will scan the bar code and then add that info in the contact list maintained in the app itself.

Highlights:

- Bar Code Generation
- Bar Code scanning
- Contact List maintenance
- Modification of generated bar code
