

Case Study

IMPORTANT

Due to a governing confidentiality agreement, we've refrained from disclosing actual client and solution names. These have been changed appropriately, to more generic sounding terms and nomenclatures.

Platform:

Android

Industry:

Training & Education

Business Challenge:

The client wanted a software application on Android Platform for educational institutes which could provide its students with a device where in some tutorials and the video sessions of the classes being held could be stored. Here the concept of mobile learning comes into play.

Software Solution:

We developed the application on Android Platform for the educational institutes where they provide their students with devices which can actually play videos of the class room sessions being held and can also store some textual tutorials. This could help the students study even when they are away from the classes.

The Application actually revolutionized the concept of m-learning. The application can be downloaded on the device and there is no log in required for that. User gets an update for the recent uploaded video and tutorials which they can download to study.

Features:

- The moving of concept from e- learning to m-learning.
- Can store the video sessions of classes being held.
- Can store some textual tutorials.
- Regular updates of videos & text can be uploaded.
- Simple to use and no log in required.
- A Complete revolution.
