

Case Study

IMPORTANT

Due to a governing confidentiality agreement, we've refrained from disclosing actual client and solution names. These have been changed appropriately, to more generic sounding terms and nomenclatures.

Client

The client is a major product development company catering to the Enterprise Segment in the Middle East region.

Platform

Blackberry / iPhone / Android

Industry

Financial

Business Challenge

The client wanted to develop an application in Blackberry, iPhone and Android platforms with a business objective to provide Information on Stock Index, Last day closing of Index, and change value of Index in real time scenario. This was coupled with a requirement to indicate the price of different stocks there change in value from last day and its volume and top activities in Indexes.

Software Solution:

Rapidsoft Technologies developed an application which was divided in to two parts client side and server side, the client side application was stored in handsets and Interacts with Server in real time which fetches all the relevant Information of Index & stocks. The solution comprises various features like Live Stock Index, updates in a real time scenario and has coupled with a robust server side module to provide relevant information.

Features:

- Shows Index their last closing value, change from the last closing value and Market Value
- Shows Stocks, in which Index they have been traded there last closing value and change in Value.
- Can select stock which would display detailed quote screen.
- Can select the screen with top activities which would also reflect stocks with Top performance or values.
- Update profile which will open screen to update stock in user's profile.
