

Emirates – Staff/Roster management App

Project:
Emirates

Location:
Dubai

Industry:
Aviation Industry

Technologies / Platform:

- Android
- Mantis Bug Tracker
- BaseCamp

Business Benefits:

Sales Force/Management

- Easily updated
- Reduces the burden of paper work
- Pilots can check the schedule easily

Accessibility

- Providing access to the crew Members with complete itinerary regarding their work plan on a daily basis from anywhere at anytime

Client

Emirates in the fastest growing international airline, with youngest fleet and with over 400 awards for excellence, it believes in providing their clients customers with the best possible level of professional service.

Business Needs

To create an application on the mobile that would help the management and other staff to make roster plans, salary details and at the same time would help the crew members of the organization to know about their work schedule.

RapidSoft's Role

To create an application that would reduce the paper work for the organization and at the same time is prompt and active enough so that the crew gets to know about their daily schedule in time.

Solution Overview

- The crew member logs in to their account and can see their roster plan
- There will be a calendar that will show the roster plan for a particular crew member and will also show the changes done in the plan
- A crew member has option to confirm or reject scheduled flight in the roster
- Clicking on the date of the flight, a separate page will open so that the crew gets to know the detail of that particular flight
- The member of the crew can contact the logistics manager in case they reject certain flights scheduled for them

Highlights:

- The pilots and other members of the crew get to know about their roster plans
- Easy way to communicate the work plan to the crew on a day to day basis
- User friendly
