- Microsoft Visual Studio
- C#.net
- SQL Server
- ASP.net

Business Benefits:**Customers**

- Customized Profile Page
- Promotion assistance for artists
- Live streaming
- Information and exclusive news about musicians, bands

Client

JamNow is an innovative new Media and Technology based company based in New Jersey, USA. It is a site dedicated to helping artists reach their fans via live music streaming with very low latency at no cost. Artists of all genres can simply go and create a profile page, download the JamNow artist client and stream music live for the world to hear all at the comfort of their own home.

Business Needs

- To provide a common platform to users where they can start an online jamming session and invite or join other people for online jamming session
- To provide a social networking platform to music enthusiast where they can share their compositions with the world
- To provide a common place to share their views and information about various music related events and topics

RapidSoft's Role

Develop a social networking web site where music lovers could upload their compositions, share their view, have events to share and lots of other cool things.

Solution Overview

One of the fewest available social networking site targeted for music lovers only. Provides simple yet effective web interface with tons of features related to music file storage and sharing.

Highlights:

- User register's with the web site by filling simple online registration form
- Upon successful registration, user will be creating groups, events and topics to discuss and share his view
- User can join groups and events created by other users too
- User can contribute and discuss the topics started by other users
- User can compose and upload his compositions to the web site and share it with his friends or to all
- User can listen compositions uploaded by others
- User can invite other people to join in for a online jamming session
