Project Profile

Location:
USA

Project:
Burn It

Industry:
Productivity

Technologies / Platform:

- Cross Platform

Business Benefits:

Customer / Consumer
- Subscription based app.
- Solution to keep communication in encrypted form to make it safe and secure.
- Fetches contact list and chat with the ones in the app.

Accessibility
- Allowing Customers to conveniently chat with the people and burn it to add more security.

Client

David, the US based client is in the field of Business.

Business Needs

- To create an app for protecting your messaging using state-of-the-art systems coupled with top-secret level end-to-end encryption.

Rapidsoft's Role

- To design and develop a mobile app for iPhone and Android that protects your messaging using state-of-the-art systems coupled with top-secret level end-to-end encryption.

Solution Overview

Mobile App

- Subscription based app.
- For a limited time period the app is free but after that app asks the users to take a subscription plan.
- Some information such as confidential communications, trade secrets, mission critical operations, or any other private information are the one people want to be safe.
- Burn It offers the ultimate end-to-end mobile encryption.
- The data send through server each time will be there in the encrypted form only. Third party cannot fetch any information from the server.
- For added security, you can burn your communications at any time. When they're gone, they're gone.
- Burning conversation means the conversation from both the ends will be deleted. Users cannot retrieve information after burning the conversation.
- This app fetches the users contact list and show within the app.
- Administrator can communicate securely to any of your team's devices.
- Secured contacts are the ones who are in the contact list and are using this app and unsecured contacts are the one who are in the contact list but are using this app.

Highlights:

- Burn It is easy and simple to use.
- Burn It is designed and used by Law Enforcement and Military to protect their communications and is available for public as well and this app can help you out.
- Burn It offers the end to end chatting in encrypted form.
- Users can burn chat and once the chat is burnt, then it's gone forever from both the end of conversation.
- Application supports only online mode.
