

Project Profile

Location:

USA

Project:

Mobile Wallet

Industry:

Mobile Payment /Banking

Technologies / Platform:

- Android
- Basecamp
- Mantis Bug Tracker

Business Benefits:

Customer/Consumer

- Easy to use
- Virtual Wallet

Client

Client in conjunction with MasterCard has created an application for Latin American banks.

Business Needs

To create an application that would help the users to discontinue the use of plastic cards (credit, debit etc) and would encourage the payment via smartphones.

Solution Overview

The user can make payments at the cash counter of the vendor by selecting the credit/debit/pre paid card he needs to use and tap it at the exit point and make the payment via smartphone

Highlights:

- The user can add, edit or remove card details (credit, debit or prepaid)
- Application highlights up to 30 transactions done by the user
- Shows the map with POIs
- User can scan utility bills and can set reminders against the bill to pay them
- Top Up Screen shows the cards the user has which allows the user to select he card and make payments and also helps the user to add cash to prepaid cards
