Project:
PADI

Industry:
Sports & Adventure

Technologies / Platform:

- Carbide
- Symbian 9.1 MR
- Mantis Bug Tracker
- BaseCamp

Business Benefits:

Customer / Consumer
- Easy to access & navigate
- Full information about the shop
- Location shown on the map for the directions

Client
PADI, located in USA is world's leading scuba diving training organization. They have over 40 years of experience in scuba diving courses, scuba gears and many more. It is one stop shop for all your Scuba Diving related needs.

Business Needs
To make an application that would geo-locate the user and list down the nearest PADI shops or point the shop's location on the map. This would be done with the help of GPS, the information will be searched about all the shops or it will either search the information according to the location entered by the user.

Solution Overview
The application allows the user with the help of a GPS enabled phone to locate by city, state or zip/postal code for PADI Dive Centers or Resorts all over the world or the user can select their current location to find the closest PADI Dive Center or Resort. The user can locate the nearest shop tap on it and find the full details from trainer's qualification to contact details, rating of the store.

Highlights:
- The application opens in a list format with the closest Dive Centers and Resorts, or the same opens in a map format.
- By clicking on the nearest center or shop the user gets center's contact information and PADI Five-Star status (PADI store rating)
- The listing gives full information about the center, the courses offered by the shop, the trainer's details and many more.
