Project Profile

Location:
USA

Project:
Secured Call

Industry:
Productivity

Technologies / Platform:

- Cross Platform

Business Benefits:

Customer / Consumer
- Solution to keep communication in encrypted form to make it safe and secure.
- Fetches contact list and chat with the ones in the app.

Accessibility
- Allowing Customers to conveniently call people.

Client

David, the US based client is in the field of Business.

Business Needs

- To create an app for protecting voice communication between two officials/people.

Rapidsoft's Role

- To design and develop a mobile app for iPhone and Android that protects your voice calls using state-of-the-art systems coupled with top-secret level end-to-end encryption.

Solution Overview

Mobile App

- Some information such as confidential communications, trade secrets, mission critical operations, or any other private information are the one people want to be safe.
- Secured Voice offers the ultimate end-to-end mobile encryption.
- The communication between two people through server each time will be there in the encrypted form only. Third party cannot fetch any information from the server.
- This app fetches the users contact list and show within the app.
- Secured contacts are the ones who are in the contact list and are using this app and unsecured contacts are the one who are in the contact list but are using this app.

Highlights:

- Secured Voice is easy and simple to use.
- Secured Voice is designed and used by Law Enforcement and Military to protect their communications and is available for public as well and this app can surely help you out.
- Secured Voice offers the end to end chatting in encrypted form.
- Application supports only online mode.
